## Secure H.323 to H.323 Video Calls

### Figure 3

Upon receipt of any packet with a destination IP address other than that of the GK the R will initiate a query (see steps 320 - 350), either directly or via a RS, to the GK to verify steps 301a and 301b have occurred. If the query response is negative, the packet will not be routed. If the query response is positive, the call will proceed to step 360.
